

FRIDAY, MAY 29, 2020

Zuckerman Research Center
417 East 68th Street
New York City

The MSK Multidisciplinary Pituitary & Skull Base Tumor Center presents:

2020 Update on the Treatment of Pituitary Tumors

EMERGING THERAPIES

Featuring Guest Faculty:
Lynnette Nieman, MD
Patrizio Caturegli, MD, MPH
Anthony Heaney, MD, PhD

MSK Course Directors:
Viviane Tabar, MD
Eliza B. Geer, MD
Marc A. Cohen, MD, MPH

Overall this course aims to improve patient care and outcomes through evidence-based discussion of clinical practice guidelines and emerging therapies. Our goal is to assess and update current practices to promote earlier diagnosis and treatment of pituitary diseases. The multidisciplinary nature of the course will allow for dissemination of knowledge across the variety of practitioners caring for pituitary patients, and for the patients themselves.

We invite patients with pituitary disease and their caregivers to attend this educational activity on a complimentary basis and participate in our interactive afternoon breakout sessions. Pituitary patients will be able to review treatment options, learn about ongoing clinical trials, and discuss their comprehensive care with providers and other patients. The educational objective of this patient session is to provide a forum for pituitary patients to discuss treatment options and new therapies with providers and other patients. Please note *AMA PRA Category 1 Credits™* will not be offered for the Patient Breakout Session.

Attendees are invited to a **complimentary networking reception** immediately following the conclusion of the course, which will provide an opportunity to meet and interact with the course faculty and get to know other members of the community.

11:45 AM	Update on Clinical Trials for Cushing's and Acromegaly Eliza B. Geer, MD
12:15 PM	Q&A/ Panel Discussion All Faculty
12:30 PM	Lunch Break

The program was well organized and great topics! I learned a lot!

I was deeply touched by the speakers and literature that was presented.

As the spouse of a patient, I appreciated the clearness of the explanations in the morning lectures... and very much appreciated explanations of how medical therapies for Cushing's work.
